Figure 1 is a 3D bar chart showing the distribution of the number of children per woman (0, 1, 2, 3) for different levels of education (0, 1, 2, 3) and different levels of income (0, 1, 2, 3). The chart shows that the number of children per woman generally decreases as the level of education and income increases. The legend indicates that the bars represent the number of children per woman, with colors corresponding to the levels of education and income.
